

Path India Ltd (PEIPL) - Crash Barriers Manufacturing

Path India Ltd is one of India's leading infrastructure solution providers with a reputation built on quality, safety, and innovation. The company has emerged as a reliable partner for national and state highway projects, contributing significantly to road safety and modern infrastructure development. Our commitment is to deliver products and services that meet international standards while ensuring sustainability and durability.

Crash Barrier Manufacturing

Crash barriers are a critical component of road safety infrastructure, designed to prevent vehicles from straying into dangerous areas and to minimize the severity of accidents. At Path India Ltd, we manufacture a wide range of crash barriers using state-of-the-art technology and premium-grade materials. Our crash barriers undergo rigorous quality testing to ensure they perform effectively under high-impact conditions, providing maximum safety to road users.

- Thrie Crash Barriers:** These barriers feature three corrugations that give them higher tensile strength and impact resistance. They are ideal for expressways, national highways, and critical road stretches where additional safety is paramount. Their robust design reduces vehicle overturning and provides controlled redirection of vehicles.

- W-Beam Crash Barriers:** The W-Beam is the most widely installed crash barrier in India due to its effectiveness and cost-efficiency. Its 'W'-shaped structure absorbs the energy of an impact, minimizing damage to vehicles and protecting passengers. These barriers are suitable for highways, bridges, and urban roads, ensuring standardized safety across different terrains.

- Channel Post:** Channel posts are the backbone of crash barrier systems, providing the necessary support and stability. Manufactured from high-quality steel, they are corrosion-resistant, durable, and designed to withstand India's diverse climatic conditions. Channel posts ensure that the crash barrier remains firmly anchored, enhancing its long-term performance.

Other Business Domains

Beyond crash barrier manufacturing, Path India Ltd has diversified into multiple sectors of infrastructure development, showcasing versatility and expertise:

- Highway Development and Construction – Delivering durable and sustainable road projects across India.
- Wayside Amenities – Developing modern roadside facilities for enhanced commuter convenience.
- Path Logisticity Bangalore – A state-of-the-art logistics hub offering seamless supply chain solutions.
- GFRP Manufacturing – Advanced production of Glass Fiber Reinforced Plastic products for industrial use.
- Thermoplastic Road Marking Paint – Providing high-visibility, durable markings for improved road safety.
